**Sources:**

<https://bruno.ph/blog/articles/swift-tutorial-mytodo/> - I used this to create the basic functionality of being able to make tasks that just had a title and could be toggled as done or not. It is in an older version of swift, so I had to update it to the current version and add functionality for details and dates on tasks and sorting by title or date

Misc swift documentation - I don't have the link for any of the specific ones

**Issues:**

The program doesn't save the list when you close the app - I wasn't able to get this part of the code updated to work in the current version of swift

I wasn't able to successfully use date variables, so I used strings - this causes an issue where if you have 12/19 and 12/4, 12/19 will come first (or any similar combo)

I wasn't able to implement editing of existing tasks
